Box III

The use of the word "preferably" in claim 1 means that the features that follow are optional.

However, if the features that follow the word "preferably" in claim 1 were taken into account, said claim would be considered to differ from document D1 by virtue of the mechanical coupling between the movable coil and the surface of the diaphragm dome. But under these circumstances, given that claim 13 relates to a method for making the diaphragm by shaping and claim 14 relates to a shaping tool, and that the method and the tool are unrelated to the mechanical coupling, the application would then consist of two inventions (PCT Rule 13) that are not linked by a common inventive concept.

Boxes VII and VIII

Under said circumstances, claim 1 would also be considered to relate to a result to be achieved but not to the teaching leading thereto, because no indication is given in said claim, or indeed anywhere in the description, of the location where the coil should be connected depending, for example, on the weight and diameter parameters, in such a way that lower frequencies are reproduced with a high output. The result is a lack of teaching (PCT Article 5).

Furthermore, the term "high" is vague and renders the subject matter of the claim unclear (PCT Article 6).

Box V

Reference is made to the following documents:

- D1: PATENT ABSTRACTS OF JAPAN vol. 0170, no. 97 (E-1326), 25 February 1993 (1993-02-25) -& JP 04 287498 A (YAMAHA CORP), 13 October 1992 (1992-10-13)
- D2: GB 2 245 591 A (SKY ALUMINIUM) 8 January 1992 (1992-01-08)
- D3: US 4 847 981 A (SUZUKI KUNIO ET AL) 18 July 1989 (1989-07-18)

The present application fails to comply with the requirements of PCT Article 33(1) since the subject matter of claims 1, 3, 9, 10, 19 and 20 does not meet the requirement of novelty defined in PCT Article 33(2). Document D1 describes a loud speaker, particularly a "tweeter" or "medium" speaker, comprising a direct-radiation spherical diaphragm with a concave surface facing the movable coil, wherein the resulting dome is made of a single piece of pure beryllium (see the abstract and figure 1). The use of the word "preferably" in claim 1 means that the features that follow are optional. Therefore, document D1 is considered to deprive the subject matter of the above-mentioned claims of novelty.

Claims 13 and 14 are not considered to involve an inventive step (PCT Article 33(3)) in the light of documents D2 and D3, which describe a method for shaping thin films made of metals or alloys (see document D2, abstract, page 3, lines 18-25 and page 4, line 28 to page

5, line 17) under high pressure and at a high temperature using a tool characterised in that it comprises an upper mould and a lower shape (see D3, column 2, lines 6-57 and column 3, lines 1-32).

The other dependent claims likewise do not appear to contain any features that might involve an inventive step.
